DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Art Unit: 3743

5. **Claims 1-5** are rejected under 35 U.S.C. 103(a) as being unpatentable over Mongeon (US 6,390,093 B1) in view of McGhee (US 2001/0051669 A1). Mongeon discloses a laryngeal mask airway comprising all the limitations recited in **claims 1-5**, with the exception of reciting the specific lubricant that the "artificial airway is lubricated" with before being "inserted down the patient's oral cavity" (column 4, lines 29-32). However, the use of a hydrophilic lubricant coating for use with a medical implant, such as a laryngeal mask airway, was known at the time the invention was made. Specifically, McGhee teaches the use of "lubricant coating for medical devices" which "aids medical devices to become slippery when wetted" in order to "reduce the coefficient of friction" during the insertion of a medical implant into patient's body cavity (paragraph [003]). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the apparatus of Mongeon by lubricating it with the lubricant coating of McGhee because it is well known in the art, as taught by McGheen, to "reduce the coefficient of friction" in order to ease the insertion of a medical implant into patient's body cavity.
